

How to Prepare For Your Colonoscopy

MAGNESIUM CITRATE / MIRALAX /
MAGNESIUM CITRATE
PREP INSTRUCTIONS

Congratulations

You are having a colonoscopy. Why is this worth celebrating? Colon cancer is the second deadliest cancer in America. In part because it is often silent; by the time people experience symptoms, the disease is so advanced it is difficult to treat.

Here's the surprising part. Colon cancer is the only kind doctors believe they can "cure." That is a word we don't usually use with cancer. But it is true. If a doctor spots and removes polyps in your colon before they turn cancerous, we can stop the disease in its tracks and prevent you from getting cancer.

Take this appointment seriously. It could save your life. The time you invest in preparing for your colonoscopy may help give you many more years of enjoyment with family and friends.

We believe this one test can help us become the healthiest community in the nation by the year 2020. How? It has the power to reduce the number of people who die from this preventable disease.

Pay careful attention to the steps outlined in this booklet. It is important you follow all the steps. Since some of your preparation needs to begin a week before your test, read this booklet now. Make notes in your calendar so you know when to stop taking certain medications and foods.

Please, call with any questions. We want to make sure you never develop colon cancer.

The Gastroenterology Team
Cheshire Medical Center/Dartmouth-Hitchcock Keene
